9. Las dos apps importan la misma librería

app.ts

```ts
import path from "node:path";
import express from "express";
import {
  COLECCIONES,
  calcularPrecio,
  validarCita,
  type Cita,
  type SolicitudCita,
} from "@coquette/shared";
import { disenos } from "./data/disenos.js";

export const app = express();

app.use(express.json());

// Fotos: /api/imagenes/spooky-coquette.jpeg → public/disenos/spooky-coquette.
app.use("/api/imagenes", express.static(path.join(import.meta.dirname, "../pub

// Citas guardadas en memoria (se borran al reiniciar)
const citas: Cita[] = [];

app.get("/api/salud", (_req, res) => {
  res.json({ ok: true, mensaje: "Coquette Nails API 💅" });
});

app.get("/api/colecciones", (_req, res) => {
  res.json(Object.values(COLECCIONES));
});

// Todos los diseños, o filtrados con ?coleccion=cherry
app.get("/api/disenos", (req, res) => {
  const { coleccion } = req.query;
  const lista =
    typeof coleccion === "string" ? disenos.filter((d) => d.coleccion === colec
  res.json(lista);
});

// Un diseño por id
app.get("/api/disenos/:id", (req, res) => {
  const diseno = disenos.find((d) => d.id === req.params.id);
  if (!diseno) {
    res.status(404).json({ error: "Diseño no encontrado" });
    return;
  }
  res.json(diseno);
});
```

FormularioCita.tsx

```tsx
import { useMemo, useState, type FormEvent } from 'react'
import {
  EXTRAS,
  calcularPrecio,
  formatearQuetzales,
  validarCita,
  type Cita,
  type Diseno,
  type ErrorCampo,
  type ExtraId,
  type Largo,
  type SolicitudCita,
} from '@coquette/shared'
import { crearCita } from '../api'

interface Props {
  diseno: Diseno
  onCerrar: () => void
}

export function FormularioCita({ diseno, onCerrar }: Props) {
  const [form, setForm] = useState<SolicitudCita>({
    disenoId: diseno.id,
    nombreCliente: '',
    telefono: '',
    fecha: '',
    hora: '',
    largo: 'corto',
    extras: [],
    cupon: '',
  })
  const [intentoEnviar, setIntentoEnviar] = useState(false)
  const [erroresServidor, setErroresServidor] = useState<ErrorCampo[]>([])
  const [confirmada, setConfirmada] = useState<Cita | null>(null)

  //  Misma lógica que usa el backend, desde @coquette/shared
  const precio = useMemo(() => calcularPrecio(diseno, form), [diseno, form])
  const errores = useMemo(() => validarCita(form), [form])

  const errorDe = (campo: keyof SolicitudCita) =>
